TITLE

It should be short, precise and related to the subject of the manuscript, the first letters of the words be in capital in bold and centered.

In the manuscripts prepared according to the master thesis, the title of the manuscript will have * sign on it and the details will be written as footnotes on the first page, left hand margined with 7 pontes.

Abstract

The abstract will be short, precise and be able to summarize the important points of the manuscript-the reasons, the methods, the findings and what the findings mean. Abstract should not exceed 300 words. No literature should be used in this section. Abstract sections should be given in English headings without paragraph indentation below 1 line.

Keywords: "Keywords" are written in 1 line below the abstracts. This section must be written with all letters with lower case (apart from proper names), if possible, maximum six words telling the study the best which were not used in the title should be chosen.

INTRODUCTION

This section includes the content of the manuscript, the reason or objective with related literature and the hypothesis to be tested.

MATERIALS and METHODS

The materials used and the methods should be under the same title. If there are subtitles, they should be numbered as 2.1., 2.2...etc with the section number. The materials used and especially the newly modified or changed methods need to be briefly explained so as to enable other researchers to use them later. However if they have been published before, they should be referred to the owner without any explanation. Proper statistics or statistical methods to explain the related hypothesis should be chosen and used accordingly. When necessary, standard deviation errors or standard deviations need to be given as measures.

26

RESULTS and DISCUSSION

27 The results need to be supported with tables, graphs or figures in this section if necessary.
28 Especially the figures given in a table should not be repeated or replicated in other contexts or
29 figures. However, the significant data in the figures need to be explained in a context. If the
30 statistical data or method has not been used properly according to the article, the Editorial
31 Board may exclude the article beyond evaluation. The significance of the data obtained here,
32 the contribution of the article supported with related literature need to be commented on this
33 section briefly.

34

CONCLUSIONS

35 The conclusions, their contribution to the science and if any, the suggestions need to be given
36 briefly in this section. The utterances used in introduction, results and discussion parts should
37 not be repeated.

38

ACKNOWLEDGEMENT

39 There can be a short acknowledgement part to thank to the supporting institutions or assisting
40 people.

41

REFERENCES

42 **The reference rules used in the manuscript.**

43 Progress reports, project outcome reports, project proposals, theses that are not open to access,
44 and internet information that has not been scientifically meaningful should not be referenced.

45 Cite references in the text as author's last name should be followed by the year of the publication
46 in parentheses. For instance; (Seydoşoğlu, 2017), (Seydoşoğlu and Kökten, 2018).

47 If the author is referred directly, only the year should be in brackets. For example; According
48 to Seydoşoğlu (2017) or Seydoşoğlu and Kökten (2018)

49 Use "et al" after the first author's last name for citations with three or more authors. For
50 instance; (Seydoşoğlu et al., 2013) or Seydoşoğlu et al. (2013)

51 If there are several works published in the same year of the same author then the reference
52 should be sequenced with a,b,c,d... after the publication year as in the following (Seydoşođlu
53 et al., 2011a) or Seydoşođlu et al. (2011a).

54 If there will several references to the same author then it should be done as in the following
55 with (,) between the years. (Çıđ, 2010, 2012, 2013)

56 When referring to authors more than one, the (;) should be used between them and according
57 to the chronological order. (Turan et al., 1995; Turan et al., 1996; Dengiz, 2008; Dengiz and
58 Sarıođlu, 2013)

59 If there are different authors having the same publication years, then it should be done according
60 to the alphabetical order as in the following: (Dengiz and Sarıođlu, 2013; Ören, 2013; Özyazıcı
61 et al., 2013)

62

63 **Preparing the reference list;**

64 All the references used in the whole context of the manuscript should be done according to the
65 authors last name in alphabetical order using the original language. The journal and congress
66 symposium names should be written in full format without any abbreviations and in italic
67 letters. In the reference list, the first line will start without any indent and the other lines will
68 have 0.5 cm margin. The titles of the manuscripts will all be written with lower case unless they
69 are proper names. The author of the manuscript will be liable for incorrect references or
70 resource. According to the above, the different sources' references will be made according to
71 the following guidelines.

99 wheat using the capacitance method. PhD Thesis, Cranfield University (Unpublished), UK.

100

101 **The publications whose authors are not given**

102 Anonymous, 1982. Methods of Soil Analysis-Part II. Chemical and Microbiological Properties,
103 Agronomy Monograph No:9, 323-336, ASA-SSSA, Madison, Wisconsin, USA.

104

105 **Internet Sources**

106 Anonymous, 2013. Classifications and Standards. [http://www.fao.org/economic/ess/ess-](http://www.fao.org/economic/ess/ess-standards/en/)
107 [standards/en/](http://www.fao.org/economic/ess/ess-standards/en/) (Accessed: 10.02.2013).

108

109 **Figures and Tables**

110 All kinds of figures, images, graphs, pictures, photos, maps or similar materials should be
111 perceived as “Figures” and the columns and charts be told as “table” in bold. All the tables and
112 figures should be listed at the end of the article in numerical order. The figures should have
113 enough resolution in order to be published. The pictures should be 600 dpi resolution in jpg
114 format.

115 All figures or tables need to be referred in the manuscript and numbered subsequently. (Figure
116 1, Figure 2 or Table 1, Table 2). The titles of the figures or tables and the explanations should
117 be short and brief.

118 The titles of the figures or tables will be written in 9,5 fonts and the explanations will be in 9
119 fonts. All kinds of abbreviations used for the statistics in the tables or figures should be
120 explained as footnotes in 7 fonts and the explanations should be separated with a “comma”.
121 The footnotes will be finalized with a “ full stop” “.”.

122 **Units**

123 Units of measurement should all be in SI (Système International d’Units) units. Use a period
124 in decimal fractions (4.75 rather than 4,75).

125 Avoid using “/”. Include a space between the units (m s^{-1} rather than m/s , kg m s^{-2} rather than
126 kg m/s^2). Units should have a single space between the number and the unit ($9 \text{ kg P}_2\text{O}_5 \text{ ha}^{-1}$, 13
127 $\text{kg m}^{-1} \text{ s}^{-2}$, 30 N m , 2 dS m^{-1} , $15 \text{ }^\circ\text{C}$). The only exceptions are for angular definitions, minutes,
128 seconds and percentage; do not include a space (22° , $33'$, $50''$, 41%).

129 The abbreviation of liter is “L”. If unit abbreviation is not at the end of the sentence, do not use
130 “.” (kg rather than kg.).

131 **Abbreviations and Symbols**

132 Abbreviations should be avoided as much as possible. The symbols should be according to
133 Article Preparation Format. If there is an abbreviation in the manuscript, the abbreviation
134 should be explained briefly like fosfor (P). The same thing is valid for the symbols.
135 Internationally accepted and commonly used abbreviations should be preferred.

136 The SI (Système International d’Units) measuring units will be used.

137

138 **Formulas**

139 The formulas should be numbered and the number should be written on right hand margin in
140 parenthesis.

141 The formulas should be written according to Microsoft word program Mathematical processing
142 with 11 fonts, the variables are in italics, numbers and mathematical figures are written in
143 straight style. If there is a reference in the context, it should be as “Equation 1” (the related
144 model is given in Equation 1”)

145 **Supplementary Files**

146 The following documents or attachment with the manuscript of the article should be prepared
147 and uploaded to the system:

- 148 • Name/surname of the author/authors, institutional information, correspondence
149 information of the related person with **Title Page** in Word format

150 • **Ethics Committee Approval** (if needed)

151 If the manuscript is accepted to be published, the original form of **Copyright Release**

152 **Form** should be sent to the editor.

153
